Syntax

MARKDOWN SYNTAX

- Adding italics and bold:

```
*Italics*  
**Bold**
```

- Adding headers (titles) of various sizes:

```
# header one  
## header two
```

- Adding hyperlinks and images:

```
[Link] (http://a.com)
```

- Adding block quotes:

```
> Blockquote
```

- Adding lists:

```
*  
*  
*
```

- Adding horizontal lines:

```
---
```

- Adding inline code:

```
`Inline code with backticks`
```

- Adding code blocks

```
```\n\ncode\n```\n
```

---

## JUPYTER NOTEBOOK SPECIAL COMMAND

- Displaying the code execution history:

```
%history -p
```

## Concepts

- Jupyter Notebook is much more complex than a code editor. Jupyter allows us to:
  - Type and execute code.
  - Add accompanying text to our code (including math equations).
  - Add visualizations.
- Jupyter can run in a browser and is often used to create compelling data science projects that can be easily shared with other people.
- A notebook is a file created using Jupyter notebooks. Notebooks can easily be shared and distributed so people can view your work.
- Types of modes in Jupyter:
  - Jupyter is in edit mode whenever we type in a cell — a small pencil icon appears to the right of the menu bar.
  - Jupyter is in command mode whenever we press `Esc` or whenever we click outside of the cell — the pencil to the right of the menu bar disappears.
- State refers to what a computer remembers about a program.
- We can convert a code cell to a Markdown cell to add text to explain our code. Markdown syntax allows us to use keyboard symbols to format our text.
- Installing the Anaconda distribution will install both Python and Jupyter on your computer.

## Keyboard Shortcuts

- Some of the most useful keyboard shortcuts we can use in command mode are:
  - `Ctrl + Enter`: run selected cell
  - `Shift + Enter`: run cell, select below
  - `Alt + Enter`: run cell, insert below
  - `Up`: select cell above
  - `Down`: select cell below
  - `Enter`: enter edit mode
  - `A`: insert cell above
  - `B`: insert cell below
  - `D, D` (press `D` twice): delete selected cell
  - `Z`: undo cell deletion
  - `S`: save and checkpoint

- Some of the most useful keyboard shortcuts we can use in edit mode are:
  - `Ctrl + Enter`: run selected cell
  - `Alt + Enter`: run selected cell, insert below
  - `Shift + Enter`: run cell, select below
  - `Alt + Enter`: run cell, insert below
  - `Up`: move cursor up
  - `Down`: move cursor down
  - `Esc`: enter command mode
  - `Ctrl + A`: select all
  - `Ctrl + Z`: undo
  - `Ctrl + Y`: redo
  - `Ctrl + S`: save and checkpoint
  - `Tab`: indent or code completion
  - `Shift + Tab`: tooltip
